

A surface covering system is described where two or more polymeric planks are connected to each other by a bonding agent which contains at least one solvent capable of at least bonding the edges of the polymeric portion of the planks wherein the bonding agent is present on at least one edge of at least one plank and/or is present on a connector, like a spline, if one is used, in joining the planks. Also described is a method to connect two or more polymeric planks which involves applying the bonding agent to at least one plank edge and/or spline, if present, prior to or after connecting the second or more planks together.
